

# Low Smoke

MIL-C-17/180 - /217

## Coaxial & Communication Cables

Zero Halogen Coax Cables

### Application

Used for all new Military and Government contracts where MIL-C-17G is required or the use of PVC is not allowed.

Due to concerns about flammability, smoke, halogen content and oil resistance with the PVC jacketed coaxial cables in MIL-C-17, the Military has developed slash sheets 180 through 217 which have low smoke, zero halogen, and low toxicity properties. These cables have excellent abrasion characteristics, meet the IEEE-383 flame test and maintain the electrical requirements of MIL-C-17.
